

# JIACHENG LI

8681 Via Mallorca #37, La Jolla, CA, 92037  
(858)-346-3311 ♦ J9LI@ENG.UCSD.EDU

## EDUCATION

---

<b>University of California, San Diego</b> Doctor of Philosophy. Advisors: Julian McAuley and Jingbo Shang. Department of Computer Science and Engineering.	Sep 2020 - Jun 2023 (Expected)
<b>University of California, San Diego</b> Master of Science. Department of Computer Science and Engineering.	Sep 2018 - June 2020
<b>Nanjing University of Posts and Telecommunications</b> Bachelor of Engineering. College of Computer Science.	Sep 2014 - June 2018

## RESEARCH AREA

---

Natural language processing, Recommender systems

## WORK EXPERIENCE

---

<b>Applied Scientist Intern</b> <i>Amazon</i> Product graph team. Project: Neural-symbolic reasoning on product knowledge graph.	Sep 2022 - Dec 2022
<b>Applied Scientist Intern</b> <i>Amazon</i> Product semantics team. Project: Attribute-enhanced personalized product highlights generation.	June 2022 - Sep 2022
<b>Graduate Student Researcher-Machine Learning, NLP</b> <i>IBM Research, UC San Diego</i> Project: Information Extraction for Microbiome Knowledge Base Construction.	Sep 2019 - Jun 2022
<b>Applied Scientist Intern</b> <i>Amazon</i> Personalization team. Supervisor: Tong Zhao	June 2021 - Sep 2021
<b>Machine Learning for Natural Language Processing Intern</b> <i>Bosch USA</i> . Project: Weakly Supervised Named Entity Recognition by Rules.	June 2020 - Sep 2020

## PROJECTS

---

**Weakly Supervised Named Entity Recognition with both Symbolic and Neural Representations**  
*Research Project. Pytorch. Snorkel*

- An iterative framework to recognize entities starting from a few seeding entities.
- Generate and select rules from raw text and predicted entities automatically. Apply rules on raw text to expand more entities.
- An independent entity instances selector to reduce the noises in the expanded entities.
- Span-based named entity recognition.

**Time Interval Aware Self-Attention for Sequential Recommendation**  
*Research Project. Tensorflow.*

- Designed a novel time interval aware self-attention (TiSA) mechanism to learn the weight of different items, absolute position and time intervals to predict the following items.
- We proposed to view users interactions history as a sequence with different time intervals, and model different time intervals as relations between any two interactions.

**Justifying Recommendations using Distantly-Labeled Reviews and Fined-Grained Aspects**  
*Research Project. Pytorch.*

- Defined each segment as an Elementary Discourse Unit (EDU) which corresponds to a sequence of clauses.
- Annotate data and trained GRU-based (Gated Recurrent Unit) and BERT-based text classifier to identify justifications from user reviews and compared the results.
- Reference-based Seq2Seq Model: A natural language generation model based on the seq2seq model. We apply two-layer bidirectional GRU as the encoder and decoder. Use attention mechanism to incorporate aspect information to improve controlment of generation.
- Aspect Conditional Masked Language Model: The masked language model in the pretrained BERT model as our sequence decoder and add attention over the aspect encoders output.
